### 2025 Atlantic Hurricane Season Forecast – Colorado State University

- A more active than normal season is still expected, reports the tropical research team at Colorado State University. The forecast is unchanged from its initial April release, which calls for 17 named storms, nine hurricanes and four major hurricanes.
- Sea surface temperatures across the eastern and central Atlantic are warmer than normal, but not as warm as they were last year at this time.
- A warmer-than-normal tropical Atlantic combined with likely ENSO neutral conditions typically
  provides a more conducive dynamic and thermodynamic environment for hurricane formation
  and intensification.
- CSU anticipates an above-average probability for major hurricanes making landfall along the continental United States coastline and in the Caribbean.
- Next updated forecast will be released on July 9, 2025.

# Flooding Activity Texas

- San Antonio has been inundated with more than 6 inches of rain since midnight. That's more than the average rainfall in June and July combined.
- Roads are closed, and first responders are conducting high-water rescues in the San Antonio area after relentless rain in Texas led to numerous reports of flash flooding, with more rounds of heavy precipitation on the way Thursday.

- Across Bexar County, the National Weather Service reported that 40 low water crossings were closed along with several others in Comal and Hays counties.
- The storms knocked out power to more than 57,000 customers across Texas, according to PowerOutage.us.
